## Gerresheimer Boleslawiec switches to 100% renewable electricity!

Düsseldorf, May 10, 2021. From this business year onwards our polish colleagues in Gx Boleslawiec will be using 100% electricity from renewable sources to minimize the impact of our business activities on the environment. Electricity produced from wind, solar, hydro and biomass sources is classified as renewable and its origin is confirmed by green certificates, so called “guarantees of origin”.

Sustainability is a main pillar of the Gerresheimer’s corporate strategy. Thinking and acting sustainably means for us to have a long-term view on our ecological, economic and social impact as a company. Regarding renewable energy, we have set ourselves an ambitious target: By 2030 100% of our electricity consumption will be coming from renewable sources.
